The NIEHS Extramural Research Portfolio puts Environmental Health Sciences research at your fingertips. A list of current NIEHS research grants can be retrieved by searching on the science code, state, or by entering in any combination of keywords in the following fields: principal investigator, institution name, grant number, project title, and description/abstract.

Please note that the term(s) you use for searching may not necessarily be the Science Code that has been assigned to the grant. For example, the term "DNA Repair" may be used in a grant title or abstract, but the main focus of the grant may be on Liver. In this case, when searching by science code, the grant would be found under Science Code 55-Liver, not 9-DNA Repair.
